

Technical services related to the conservation
and sustainable use of natural resources

www.blue-pangolin.co.uk

We've been around a while, so we see challenges differently

Through technical advisory, project delivery and partnership we advance and support biodiversity conservation, ocean governance and sustainable development, across marine, coastal and terrestrial systems.

From international policy to site-based delivery, we provide the technical expertise, strategic insight and coordination needed to deliver real, measurable conservation outcomes.

We help organisations and governments to ensure the sustainable use and management of marine, coastal and terrestrial ecosystems.

Drawing on our knowledge and a proven portfolio, our Team delivers targeted, high-value expert advice, to clients. This ensures clients navigate complex challenges, strengthen partnership and deliver projects to the highest of professional standards.

**Project
Spotlight**

Dive into some of our projects for more information

Design & Development

We turn vision into strategy. By shaping programmes and developing solutions, we provide end-to-end design and development that reflect environmental priorities, funding realities, local capacities, and policy frameworks.

Evaluation & Capitalisation

We measure what matters. Our strategic evaluations, including mid-term and terminal, connect evidence with action, capturing lessons, demonstrating impact, and informing future investments in effective conservation.

Technical Implementation

We deliver inception and kick-off processes, workplan delivery, interim and final reporting, monitoring and evaluation frameworks, and budget management across biodiversity tools, ecosystem resilience, marine spatial planning and management effectiveness.

Management of Partnerships

We build lasting partnerships. From focused networks of 20 to global environmental initiatives with 100+ members, we embed strong governance, accountability, and shared ambition that drive collective action for both people and planet.

Tools for Biodiversity, Management Effectiveness and Report Production

We design adaptive and replicable tools, guidelines and technical reports that empower managers and align monitoring, planning, and reporting with global conservation frameworks and real-world needs.

Capacity Development

We build, develop and enhance capacity to equip institutions and communities with the knowledge, training, and strategies to implement effective and lasting conservation solutions.

Let's work together

Our clients engage with a coherent team that ensure high quality delivery. Some of our clients include: Australian Institute of Marine Science (AIMS), Blue Action Fund, Government of Monaco, International Union for Conservation of Nature (IUCN), Landell Mills, Mediterranean Protected Areas Network (MedPAN), Prince Albert II of Monaco Foundation, The French Ministry of the Overseas, The MedFund, UN Development Programme (UNDP), UN Environment Programme (UNEP), and UNEP/MAP Specially Protected Areas Regional Activity Centre (SPA/RAC).

What sets us apart?

- Deep technical expertise paired with strategic insight.
- Long term experience with multilateral environmental agreements and policy processes, programmes and practices.
- Clear, credible outputs written for decision makers.
- Strong coordination across disciplines, institutions and geographies.
- A collaborative approach that builds trust and delivers results.
- Extensive global network of partners across all levels of implementation.

We welcome conversations with those seeking an experienced and reliable partner. If you are exploring new ideas, refining an approach, or looking for additional capacity at critical moments, please get in touch to discuss how we can work together.
